Summary

Results-driven **Front-End Developer** with over **6 Months of experience** in building responsive web applications. Proficient in HTML5, CSS3, and JavaScript frameworks like React and Next. I excel in API integration and performance optimization, committed to delivering high-quality user experiences in collaboration with designers.

Skills

Languages: HTML, CSS, JavaScript, Typescript, C/C#

Libraries: React.js, Next.js, Axios, tanstack query, Bootstrap, Tailwind CSS

Tools: Node, NPM, Vite, Git, ClickUp

Soft Skills: Excellent communication, collaborated with cross-functional teams, Problem Solving, Team Management, Decision Making

Database: PostgreSQL, Prisma ORM

WORK EXPERIENCE

Moboroid(internee)

Mirpur, AJK, Pakistan

UI Developer

05/2023 - 08/2023

- Professional upgrading of UI interface to a modern design, resulting in increase in user engagement and reduction in user complaints regarding usability.
- Maintained and enhanced the performance of existing products by implementing UI optimizations, reducing loading times and ensuring smoother user interactions.
- Collaborated with product managers and designers to align UI updates with user feedback and business goals, resulting in a more user-centered approach to product development.

CodeBrill (full-Time)

Lahore, Punjab, Pakistan

Front-End Developer

11/2024 – 4/2025

- Designed and developed the Seven Service Logistic SaaS application from the ground up, delivering a robust, user-friendly platform that streamlined event management for clients.
- Implemented responsive design principles, ensuring the application was optimized for a wide range of devices, which increased user accessibility.
- Enhanced the front-end performance by implementing efficient coding practices, reducing initial load time and improving overall user experience.
- Collaborated closely with back-end developers and product owners to integrate third-party services and APIs, enabling seamless functionality and enhanced scalability.

Projects

Employee Management System

09/2023 - 10/2023

The **Employee Management System** built with React simplifies the management of employee data, including task assignment and completion. It provides a responsive interface with real-time updates, enabling users to track and manage employee information efficiently. Role-based access control.

- Utilized React.js and Tailwind in project development.
- Integrated with local storage for user authentication.
- Addressed technical challenges promptly to ensure system reliability and security.

React.js | JavaScript | Tailwind | CSS | [\(Link\)](#)

Education

Mirpur University of Science and Technology

Bachelor in Software Engineering

11/2020 - 09/2024
